

D FENDERS

Extruded from natural rubber, these fenders are ideal for handling medium loadings and are equally as appropriate to truck loading bays as they are to wharf/vessel protection. Available in a range of cross-sectional sizes, - refer to profiles below and can be bolted, strapped or sleeve mounted in position.

Profiles are shown approximately one quarter full size.

MARINA FENDERS

Skellerup manufacture a range of specifically designed rubber extrusions for installation in pleasure and fishing berths. Significant maintenance savings and protection of capital investments can be made through the installation of correct fendering. Manufactured from non-marking (off-white) natural rubber. Easily fixed to pontoons, walkways and jetties.

UNIT FENDERS

Designed for wharf protection for large displacement vessels; from fishing through to container vessels. Specifically designed for each particular installation, and supplied with all associated wharf anchoring (fixing) hardware; bolts, resin sockets, chains etc. and if required can be fitted with HMWPE front panels. Skellerup are suppliers and distributors of Seibu, Type 11, TTV, V & NW style fenders for wharf or vessel fendering.

CYLINDRICAL TYPE FENDERS

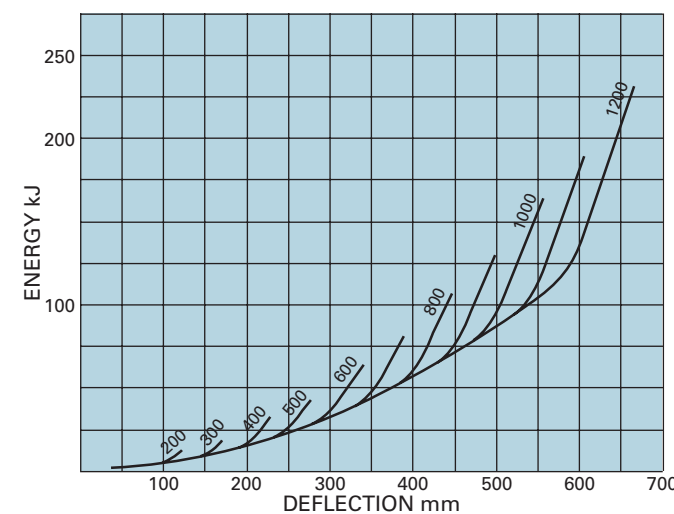

Proven in the Australasian and Pacific Basin market over the past 30 years, Skellerup Cylindrical Fenders are designed for either axial or radial installation. Available in sizes up to 900mm OD and in lengths to 10 Metres. (OD/ID ratio 2:1).

For axial mounted fenders, mounting spigots are factory fitted in one end and to avoid instability the length is limited to 1.2 times OD.

Manufactured from virgin grade natural rubber, these fenders give excellent protection for both vessel and wharf.
